- New patient engagement capabilities
- Faster deployments
- Population-level view

Digital Health at Scale

Xealth was founded by a team of consumer technology experts who had successful careers in cell phone, website, and interactive technology. In 2016, they joined Providence and saw an opportunity to apply their knowledge of digital technology to better connect doctors and patients using everyday tools – for clinicians, the EHRs; for consumers, their smartphones and computers. In 2017, Xealth was spun out, adding health care experts and engineers. The team now comprises more than 60 members, including clinical informaticists, health IT record specialists, and health care business professionals.
